

Customer Journey & Conversion Funnel Dashboard Report

Project Title

From Visit to Purchase: Customer Journey & Conversion Funnel Dashboard (Tableau)

Overview

This project presents an interactive Tableau dashboard designed to analyze the customer journey from initial website visit to final purchase. The dashboard identifies key drop-off points, evaluates conversion performance, and highlights revenue-driving factors across channels and regions.

Objective

- Analyze customer behavior across funnel stages
 - Identify major drop-off points in the conversion journey
 - Evaluate performance of acquisition channels
 - Understand regional contribution to revenue
 - Provide actionable business insights for optimization
-

Key Metrics

- **Total Customers:** 100
 - **Conversion Rate:** 42.86%
 - **Total Revenue:** ₹8,463
-

Dashboard Components

1. Funnel Analysis

The funnel chart visualizes customer progression through key stages:

Visit → View → Cart → Checkout → Purchase

- Significant drop-off observed across stages
- Helps identify bottlenecks in the conversion process

2. Drop-off Analysis

- Approximately **97% of users drop off before completing purchase**
- Only a small percentage successfully convert
- Indicates major leakage in the funnel

3. Channel Performance

- **Direct channel** shows the highest conversion rate
- **Google and Instagram** underperform with low conversions
- Highlights effectiveness of different acquisition strategies

4. Region Analysis

- **East and West regions** generate the highest revenue
- **South region** contributes significantly less
- Indicates regional performance disparity

5. Key Insights Panel

- High drop-off rate (~97%) across funnel stages
- Low overall conversion despite high initial traffic
- Direct channel is the most effective acquisition source
- Weak performance observed in paid channels (Google, Instagram)
- Major loss occurs between **View → Cart stage**

Interactivity Features

- Click on any chart to filter the entire dashboard
- Dynamic filtering across all visualizations
- Reset Filters button to restore default view
- Tooltips to guide user interaction

Design & Usability

- Clean and structured layout
- Consistent KPI placement for quick insights
- Interactive elements enhance user experience
- Color-coded visuals for better readability

Business Recommendations

- Optimize the **View → Cart stage** to reduce drop-offs
- Improve targeting and strategy for low-performing channels
- Focus marketing efforts on high-performing regions
- Enhance user experience during checkout process
- Leverage high-performing channels like Direct for growth

Conclusion

This dashboard provides a comprehensive view of the customer journey, enabling data-driven decision-making. By identifying critical drop-off points and performance gaps, businesses can take targeted actions to improve conversion rates and maximize revenue.
